Answers   **Find the change**

1) Lorain bought a packet of peanuts for $ 13, if she paid $1,000, how much change did she receive ?

Change $1,000 - $ 13 = $987

2) Nicole parked her car at a park for 2 hours in which 1hour costs $1. She parked for 4 hours and on paying she gave $ 50. How much change did she receive ?

Total expenditure = $1 x 2 hours
                         = $2
Change $50 - $2 = $ 48

3) Fire crackers cost $20 and a christmas tree costs $53. If I pay $100 for a fire cracker and an Xmas tree, how much will my balance be ?

Total expenditure $20 + $53 = $73

Change $100 - $73 = $ 27

4) A day at the hotel costs $ 100. If I spend 10 days and pay $1,000 at the reception, how much is my change going to be ?

Total expenditure $100 x 10 days = $1000

Change $1000 - $1000 = $ 0
